

# Touchscreen Environmental Controller

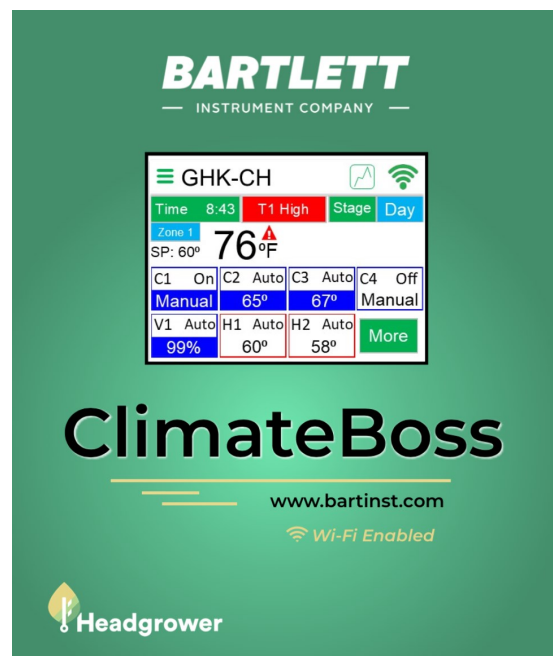

## ClimateBoss

**BARTLETT**

— INSTRUMENT COMPANY —

Touchscreen control for your  
greenhouse environment!

The ClimateBoss enables you to control **either louver fan or natural vent** greenhouses. This controller is an alternative to either the RWL11x2 or GHK series. With the ClimateBoss you can program one or two zones. It allows for programmable temperature settings in **DIF, DAY & NITE** stages. **Statistics** for high, low and average temperatures for the past 7 days are available as graphs. Other features include a **cycle timer** for irrigation, misting, or lights; a vent stage for dehumidification; an **alarm output** for high or low temperatures, and power loss or hardware trouble. This controller also integrates with our **C.I.S Software**.

\*Headgrower integration initially available  
via C.I.S

- Touch screen technology with color graphics display
- Graphing for statistics (e.g. average temperature)
- Natural vent or louver/fan
- Easy & intuitive programming
- Wi-Fi enabled for firmware updates
