# Prevent Unauthorized Use of Your Controller!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#)

Do the settings on your controller ever get changed when you don't want them to? The GHK12X2 and RWL11X2 both have a lockout option to prevent the wrong person from changing your settings.

With a push of just a few buttons, you can control who is able to make changes and who isn't. Once the lockout is activated, all programming functions will be rendered inactive until it's turned off.

You can still monitor minimum temps (1 key), maximum temps (3 key), Reset for min and max temps (2 key), change the zone being viewed (5 key), view currently on outputs (8 key), and stats (0 key).

To activate the lock out using the GHK12X2:

- Press the Menu button and rSEt will appear.
- Type 4,4,0 and the screen will alternate flashing LouT and YES. (To toggle between yes and no, press the 1 key)
- Press Enter when YES is displayed and the lockout will activate.

To activate the lockout using the RWL11X2:

- Press the Next button and RSET will appear.
- Type 5,6,2,5 and the screen will alternate flashing LouT and YES. (To toggle between yes and no, press the 1 key)
- Press Enter when YES is displayed and the lockout will activate.

As always if you have any questions or need help with settings, we're only a phone call away!
