We've Got You Covered With Our On-To-Auto Feature!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#) • [Radio Link](#)

Ever turn your greenhouse temperature up temporarily and forgot to set it back? Don't wake up in the middle of the night realizing your greenhouse heat is still turned up, use the On-To-Auto feature instead.

If an emergency situation develops or you need more comfortable working conditions for the time being, any output can be turned to ON manually. With the On-To-Auto feature, you won't have to worry about setting them back to auto, the controller does it for you.

Program in a specific time and when that time is up, the controller will switch any output changed to on back to auto. Want them to stay ON permanently and not switch back to AUTO? Type in all 0's and they'll stay ON until you change them back.

To program the GHK12X2 or RWL11X2:

- Press the 'MENU' or 'NEXT' button until OTOA appears on the display.
- Press 'ENTER'.
- Type in the desired number of hours/minutes for the outputs to stay at the ON setting. (Max: 23.59 - 23 hours 59 minutes, Min: 00.00 - Outputs stay ON and will not change back to AUTO)

- Press 'ENTER' and the controller will revert back to normal operation.

If you want to monitor or make changes to your greenhouse from home or your office, check out our CIS software. If you've got questions or need help, we're always just a phone call away!
