Save Energy With This Great Feature!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#) • [Radio Link](#)

When the weather is cold and heating costs can start climbing at night, what better way to conserve heat and energy, than by using an energy curtain. Using an energy curtain with one of your Bartlett controllers is really simple.

How It Works:

Once programmed for the energy curtain, the controller will fully extend the curtain during the NITE stage and fully retract during the DIF and DAY stages. This allows the greenhouse to conserve heat and to hold off opening the curtain until the air above the curtain has been warmed by the sun.

To program the GHK12X2C:

- Press "MENU" until CURT is displayed
- Press "ENTER"
- Press "MENU" until ENRG is displayed
- Press "ENTER" to activate

To program the RWL11X2:

- Press "VENT 2" until ENRG is displayed
- Press "ENTER" to activate
