# Program Your Controller With Ease!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#) • [Radio Link](#)

Make programming your controller much simpler by utilizing our Programming Tools! Using our programming tools, you input the settings you want and it will produce step by step instructions to program your controller. If you've already got our Computer Interface System (C.I.S.), you can write the instructions directly to the program and you're done in the blink of an eye.

Start by telling the Programming Tools what type of controller you have and how many zones. Then, put in the temperatures for the different outputs to activate. Next, input the time of day you'd like each stage to begin. Press the programming instructions button and step by step instructions are produced. If the Write to File button is clicked, it will save a copy of your settings to your computer.

In the future, you will be able to refer back to your saved programming instructions if you'd like to use the same program year to year. Give us a call if you've got questions or would like more information about our programming tools!

Help with Bartlett Greenhouse Controllers

During the day, at what temperature do you want the first heat to activate? 65

During the day, at what temperature do you want the second heat to activate? 65

During the day, at what temperature do you want the first cool to activate? 66

During the day, at what temperature do you want the second cool to activate? 69

During the day, at what temperature do you want your third cool to activate? 66

During the day, at what temperature do you want your fourth cool to activate? 69

How long should DIF last? (hh:mm) 3:00

How much time (hh:mm), from sunrise, do you want DIF to begin? 2:00 after before

How many degrees of DIF would you like to use? 0

What is the current time of sunrise? (Military Time) 06:00

What time would you like to begin your NITE temperature? (Military Time) 17:00

Compared to your DAY temperature, how much cooler would you like your NITE temperature? 0
