Don't Get Caught Without Spare Parts!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#) • [Radio Link](#)

Don't get caught with a greenhouse full of flowers and no spare parts to back you up. This time of the year, it's important to keep a few spare parts around the greenhouse in case the unfortunate happens and something breaks. Some important parts to keep on hand are thermistors, relays, greenhouse relay board, greenhouse display board, and a transformer.

- **Thermistors** - If one of your thermistors fails and you've got the controller set to 2 zone, you won't have any way of monitoring temperature until a new thermistor can be sent.
- **Relays** - It's always handy to have extra relays in case one fails or malfunctions.
- **Greenhouse Relay Board and Display Board** - If there is damage to one of the boards, the controller won't work. Spares will get you up and running in no time.
- **Transformer** - If the transformer goes bad, the controller will lose power and will be unable to regulate the greenhouse.

Call us today for more information or to order spare parts for your greenhouse. Then, you'll never have to wait to get things up and running again!
