# Refire Your Last Program Quickly With This Trick!

[Home](#) • [Controller Overview](#) • [V6CF](#) • [RTC1000](#) • [3Key](#)

Did you know you could re-fire the last used program with just a couple button pushes? It is made simple with this quick trick. If you use the same program time after time, there's no reason to reprogram the controller each time. Follow these instructions for a quick review and firing of your 3 key controller.

To refire the last used program:

- Be sure the kiln is either reading STOP or IdLE.
- When STOP or IdLE is displayed, press the down key.
- The program will quickly be reviewed and rEdI will be displayed.
- Press the START button to begin the firing.

If you are confident that the last fired program has not been changed, you can skip reviewing the program by simply pressing the down arrow twice. The controller will go directly to rEdI and is ready to be fired. Check back next month for more helpful controller tips!
