# Learn More About Our Nite Lockout Feature!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#) • [Vent Boss](#)

In our last newsletter, we highlighted the uses of the Nite Lockout feature of your GHK12X2 controller. It was mentioned that you could bank heat from the day into the night to help lower heating costs for your greenhouse. Here's what our readers have to say:

A knowledgeable distributor cautioned that high humidity can be trapped as well as the day's heat. If you notice a humidity problem in your house, he suggests using the controller's dehumidification cycle just before the NITE stage begins.

It was additionally noted that Nite Lockout can be used to keep fans from running all night during the hottest part of summer. To do so:

- Set the NITE start time sufficiently past sunset so the greenhouse no longer is heating from the sun and has been given a chance to cool down.
- Set Cool 1 to manually on with an On-to-Auto time of 0 so it will not revert back to the Auto setting.
- Set Nite Lockout to ON.
