# Wirelessly Monitor and Control Your Kiln!

[Home](#) • [Overview](#) • [V6CF](#) • [RTC1000](#) • [3Key](#) • [Data Logger](#)

The Radio Link can be a great way to wirelessly connect your Bartlett V6CF or RTC1000 controllers to your computer. Used in conjunction with the KISS software system, you can quickly monitor up to 50 different Bartlett controllers simultaneously. With the Radio Link, there is no need to wire each kiln together to utilize the KISS software's capabilities.

The Radio Link, along with KISS, makes for a great firing tool. It allows for easy monitoring and data collection. You'll be able to collect and store data from the firing process which allows you to evaluate the kiln's temperature at different points in the firing. The Radio Link is easy to set up and begin using. The host unit plugs directly into the USB port on your computer, making set up a breeze. Order the Radio Link with KISS and you'll be monitoring your kilns before you know it!
