# Don't Let Your Greenhouse Get Cold With Our Low Temp Alarms!

[Home](#) • [Controller Overview](#) • [GHK12X2H](#) • [RWL11X2](#)

It's that time of year again to make sure your greenhouse stays warm! The RWL11X2 and GHK12X2 both have an alarm function that can help alert you to any high or low temperature issues in your greenhouse.

In using our controller, you can set it to ring an alarm when the temperature in the greenhouse gets below your chosen temperature. When used with our C.I.S. software, you can receive text or email alerts when the low temperature alarm sounds. You'll know about the alarm in plenty of time to come up with a solution before your crops see any damage.

To set the alarm for your GHK12X2 or RWL11X2:

- Press 'Menu' or 'Next' until ALM1 appears in the display.
- Press 'Enter' and 'Lo' will alternate with the low alarm temperature.
- Type in the desired temperature for the low alarm and press 'Enter'.
- 'HI' and the current high alarm temperature will alternate on the display.
- Type in the desired temperature for the high alarm and press 'Enter'.
- The display will now return to regular operation. If the controller is set for 2 zones, repeat steps for ALM2.

Need help setting your controller or have more questions? Give us a call or respond to this email and we can help you out!
