Make Our Controllers More Versatile for You!

[Home](#) • [Controller Overview](#) • [GHK12X2](#) • [RWL11X2](#)

Did you know you could use one controller to control two different zones? The GHK12X2 and RWL11X2 can both operate two separate zones. The outputs are split equally between the two zones so it is great for smaller houses that have a few pieces of equipment.

The GHK12X2 splits into two zones, each with 2 cool outputs and 1 heat output. The RWL11X2 splits into 2 zones, each with 1 proportional output and 1 heat output. When split into two zones, you'll also be able to program temperatures for each zone separately. Meaning, each zone has an independent set point which allows you to have two houses with crops requiring different temperatures. You're also able to set independent high and low temperature alarms for each zone.

Having the ability to run our Bartlett controllers in two zones makes it very versatile. If you have a house that you'd like to use as a single zone for part of the year and separate into two zones for the next season, you may only need one controller to accomplish that. If you've got questions, you can give us a call and we can go over your options.
