Spring is Windy! Are Your Roof Vents Protected?

[Home](#) • [Controller Overview](#) • [Wind/Rain Alarm](#) • [RWL](#) • [GHK](#)

The Wind/Rain Alarm can help you protect your roof vents or curtains and plants from windy and rainy weather. When it's rainy or the wind speed is too fast it will trigger the alarm and adjust your roof vents and side curtains to the current weather.

Some of the great features the Wind/Rain Alarm has to offer are:

- 3 levels of rain sensor sensitivity
- Programmable wind activate set point and delay
- Programmable wind drop-out set point and delay
- Options for Immediate or delayed response time
- English and Metric units for both wind speed and temperature
- Records the last 7 days wind or rain alarm and maximum wind speed
- C.I.S. ready for data collection.
- Retail at just \$649

With C.I.S. (Computer Interface System), you can monitor and program your Wind/Rain Alarm from your computer. If the wind or rain alarm sounds, the alarm will go directly to your computer. You can also link other Bartlett controllers to your C.I.S. system and monitor and program them as well.

Don't let your crops and roof vents suffer, call us today and get a Wind/Rain alarm to protect them!
