New Year's Resolution: Make Your Greenhouse More Efficient!

[Home](#) • [Controller Overview](#) • [GHK](#) • [RWL](#)

The beginning of a new year often starts with new years resolutions, so why not make your greenhouse a top priority and vow to make your greenhouse more efficient this year! Often times, energy efficient solutions can save thousands of dollars over the years, freeing up money for other improvements or projects. Often times, you can get rebates through your energy company or from the government to help offset costs.

Here at Bartlett, we took initiative last summer to make our company more efficient by installing solar panels on our roof. The project will pay for itself in time and will save us a great deal in the future. It may seem like a lot to take on but if you keep the ultimate goal in mind the benefits will definitely out weigh the work.

A controller can go a long way toward making your greenhouse more energy efficient. Rather than having independent controls for each piece of heating or cooling equipment, the controller takes care of it all so heating and cooling will never be on at the same time. With a better regulated greenhouse, crops will grow more uniformly, making plant production run smoothly. Installing controls is just one small step of many you can take to make your greenhouse more energy efficient!
