The Genesis: The One Controller That Can Do It All!

[Home](#) • [Overview](#) • [V6CF](#) • [RTC1000](#) • [Genesis](#)

Our Genesis controller makes programming your kiln easier than ever. While some of our older models were geared toward a specific type of firing, the Genesis allows for easy programming for virtually any type of firing: glass, ceramics, metals and more.

When programming the Genesis, it allows you to choose between a variety of types of firing: Bisc, Glaze, Glass, or Custom for more complex firing schedules. If you're a potter that likes to dabble in glass, you can quickly switch from a glass program to a ceramic program with just a few button pushes. You can also save and rename 12 custom programs so you can load your favorites easily.

The Genesis also allows you to customize the loading menus to only show certain types for firing or you can change the types of firings displayed in the custom menu. If you do a lot of heat treating, the custom firing menu can display all heat treating options (all of which can still be altered to exactly what you need), or a mix of heat treating and PMC firings. The Genesis programming can be simplified down to a novice mode that will help guide you through a series of programming steps, or made more complex with the ability to program up to 32 segments in a custom program. It really is up to you and your preferences!

One of the best things about the Genesis is it can easily replace an older Bartlett controller if you are looking to upgrade from your current controller. If you have questions or think the Genesis might be a good fit for you, give us a call and we will be happy to help!
